Not illustrated. 1775 Excerpt: .the axis Ce, Cg, in e and g; and the longest of these two perpendiculars Ce or C, will be the semidiameter of that circle, whose image is the least circle upon the retina, which can comprehend all the rays that enter the pupil. .3. Of long and short-sighted eyes, and of speacles. OFlong-132. If the cornea and crystalline, or either of them, be too flat, a tightedness. pencil of light coming from an object at an ordinary distance, will have Tig-24. its focus at some points, beyond the retina; and therefore vision will be indistinct, as in the case of an object too near for a common eye. This defect commonly comes on with old age, and is thought to be occasioned by a shrinking of the humours, which flattens the cornea, and the coats of the crystalline: And hence, these kind...
