*A very great ebook with perfect and lucid answers. It can be packed with wisdom and knowledge I found out this book from my dad and i encouraged this publication to learn.

Then A and A are points on the curve. Why? Now between F and F take any point K. With F as center and AK as radius, describe arcs; with F as center and A K as radius, describe arcs intersecting the former in P and P . By interchanging radii, Q and Q are found. These all lie on the curve because the sum of the focal distances of each is 2 a. After finding enough points we join them by a smooth curve. (2) Mechanically. Fix pins at F and F and join them by a string of length 2 a. A pencil point P moved so as to keep the string stretched will trace the ellipse; for in all positions of P, we have $PF + PF = 2 a$. i-l. $yy - 1 a^2 62$ is the required equation. The normal is $(y - Vi) = j (x - xi)$ The subtangent and subnormal are found by putting $y = 0$ in equations of the tangent and normal; viz., subtangent $= -x$, b2 subnormal $= -x$, as Note.- That the subtangent is a function of the abscissa and a. 128. Equation of tangent in terms of slope.--The abscissas of the points of intersection of the line $y = mx + o (1)$ with $S+i=i$ are determined by the equation $a;2 (mx + cf 1, . + p 1 (3) 3$. The tangent and normal to the ellipse at the end of...
